

# Kofax ReadSoft Collector

Kofax ReadSoft Collector™ is an extension of Kofax Invoice Automation™ that enables data capture from incoming email. With Collector, emailed data is automatically processed, just like data from paper documents. Identical business rules are applied and the captured data is transferred to the host financial system in the same way. Depending on specific settings, incoming attachments can be ready for down-stream processing in a matter of seconds.

Collector supports and can work with a wide range of email servers, operating via protocols EWS, MAPI, IMAP or IMAP over SSL. This includes, but is not limited to email servers such as Microsoft Exchange and Lotus Notes.

## HOW IT WORKS

ReadSoft Collector works with Kofax Invoice Automation, which seamlessly integrate with most business systems

- ◆ Email attachments that are image files or PDF documents are interpreted
- ◆ Email attachments that are XML files are processed directly by using intelligent XML handling capabilities of Kofax Invoice Automation and Collector

## BENEFITS

### Reduce handling costs

As long as email attachments arrive in the correct inbox, they are opened and imported automatically.

### Expedite processing

Automatically handle incoming documents instantly.

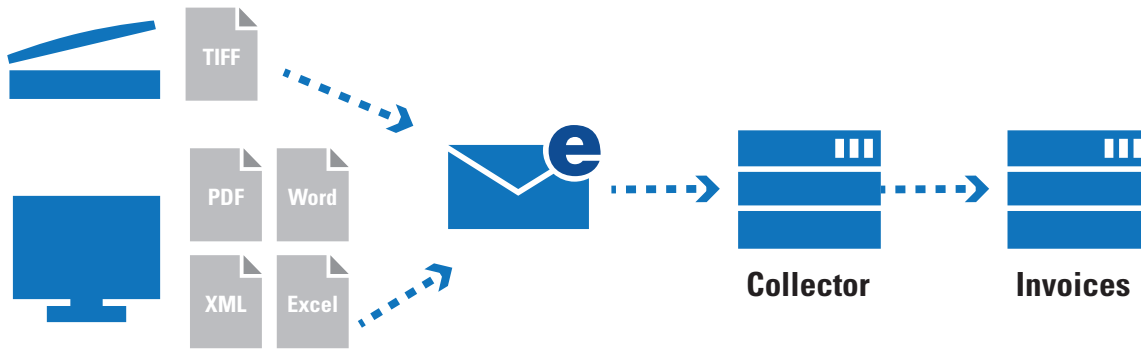

### Improve control

Email is sorted automatically, and all sender information is retained.

# KOFAX

## PRODUCT SUMMARY

Email image file attachments from various sources are detected and sorted by Collector and transferred to Kofax Invoice Automation.

## FEATURES

- ◆ Capture of image files (PDF, TIFF, PNG, etc.), Word, Excel and XML files from email attachments
- ◆ Mail feedback to the sender if there is an issue with an invoice
- ◆ Seamless import emailed documents into Kofax Invoice Automation
- ◆ Easy set-up
- ◆ Completely transparent

## TECHNICAL SPECIFICATIONS
